

McCOMBS SCHOOL OF BUSINESS

Salem Center for Policy

Project and Midterm

David Puelz

October 20, 2022

Project

The days of the presentations will be:

- November 17 (depending on # of groups)
- November 29
- December 1

*order of presentation will be randomly assigned among groups

The days of the presentations will be:

- November 17 (depending on # of groups)
- November 29
- December 1

*order of presentation will be randomly assigned among groups

There are two components of the project:

(1) **Presentation**: either using powerpoint, beamer, or Rmarkdown slides. 15min long, states your question, data, findings, and conclusion, as if you were presenting your results to your boss.

(2) **Write-up**: using Rmarkdown, like our homework but very polished with pretty figures and descriptive prose. Like the beginnings of an academic paper.

*breakdown: 25% (1) + 75% (2)

- The project will revolve around a question of interest to **you!**
- You can either **replicate an existing paper** or **answer your own empirical question** using data that you figure out how to find and the tools we've learned in this class.
- If you choose **replication**, I expect your numbers will exactly match the published paper and it is fully replicated. If you choose your **own question**, you are free to analyze the data how you wish.

Important dates:

Oct 27 – group formation (≤ 3 people) and project approval

Nov 17, Nov 29, Dec 1 – class presentations

Dec 5 – project write-ups due

- Start thinking about your project and finding data soon! **This will often take the most time**
- Feel free to ask me questions as you start to formulate your question of interest

75min, in class on **Oct 20** (blue book)

T/F & free response type questions on the **causality through prediction** sections of the course

There will not be code-writing. Instead, there might be blocks of code for you to interpret

For studying, focus on the big pictures concepts (e.g., random assignment, confounding, bootstrapping, & conditioning). Any derivations requested will be simple. Go through slides, readings, & homeworks
